**Fluid warming** is a critical part of maintaining patient normothermia. Our portfolio of irrigation warming products are designed to help your teams reduce the risk of negative patient outcomes. Our sterilized products are individually packaged for easy draping and turnover. Northfield Medical Manufacturing is a leading provider of infection control and workplace safety products. Health systems and surgery centers have relied on our products for over twenty years.

## Key Benefits

- No gaps between the drapes and the warming units
- Conforms to the inside of warming basins
- Designed to work across multiple warming systems
- Individually packaged for easy OR turnover
- No supply chain issues

All perioperative patients are at risk for developing hypothermia. Maintaining normothermia by preventing hypothermia is supported by clinical practice guidelines. High-quality evidence supports the use of **active warming** for prevention of unplanned hypothermia.

Guidelines for Perioperative Practice. Denver, CO: AORN. 2021. Print Edition.
